Art Unit: 1712

1. Initially, please note that this application has been transferred to a new examiner, Examiner Margaret Moore. The new examiner believes that the previous examiner erred by not making a restriction requirement in this application. While an election of species requirement was made, the Examiner believes that a restriction requirement is as or even more important in this application. Note that claim 1 is drawn, in essence, to a copolymer that requires three different monomers but could be used in numerous processes. The Examiner apologizes for this unintentional delay in prosecution but truly believes that combing search and examination for both Groups I and II (as detailed below) would be an undue burden. The election of species requirement made in the office action dated 11/25/05 is maintained.

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1 to 21, drawn to a polymer, classified in class 526, subclass 328.5.

II. Claims 22 to 28, drawn to a method, classified in class 507, subclass 224.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions of Group I and Group II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the product can be used in a materially different process, such as a process of forming a pressure sensitive adhesive, a process of treating textiles or a process of coating a substrate.

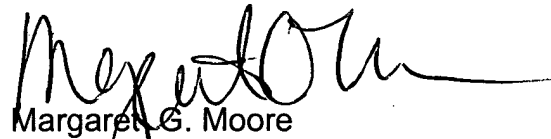

4. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
